Streamlined Carotid Artery Calcification Labeling for CTA Scans

Jiehyun Kim, Nathan Arnett, Josh Kotler, Dhruv Shah, Brett Cucchiara, Jae W. Song, Daniel Haehn

We require vast amounts of manually labeled calcifications to train advanced machine learning classifiers for carotid artery plaque detection and phenotyping high-risk calcifications for ischemic stroke patients. We developed ***CACTAS-Tool*, a web-based software** for streamlined calcium labeling with minimal user interaction.

CACTAS-Tool is **faster** than **3D Slicer**:
Expert with **CACTAS-Tool** 376.6±113.52s
Expert with **3D Slicer** 631.2±325.88s
Novice with **CACTAS-Tool** 126.59±21.57s
Novice with **3D Slicer** 366.09±16.77s

Accuracy (Jaccard Index) between both softwares was comparable:
Expert with **CACTAS-Tool** 0.537±0.077
Expert with **3D Slicer** 0.464±0.238
Novice with **CACTAS-Tool** 0.481±0.070
Novice with **3D Slicer** 0.496±0.060

UMass Boston

Penn Medicine

Single-click Carotid Artery Plaque Segmentation.

Our web-based tool is **2.89x faster** than manual annotation.
