

**Join INIA Biosciences & UMass Boston
Postdoctoral Scientist
(AI + Ultrasound Imaging + Bioelectronic Medicine)**

ABOUT INIA BIOSCIENCES

INIA Biosciences is pioneering the future of inflammation treatment through innovative bioelectronic medicine. Our mission is to design and manufacture ultrasound devices that treat inflammation safely and effectively, without drugs.

By leveraging the body's natural inflammatory reflex pathways and combining it with cutting-edge AI-powered ultrasound imaging, we are creating the first wearable therapeutic device that patients can use at home to treat chronic inflammatory conditions. Our vision is a world where people achieve better health without relying on pharmaceuticals.

ABOUT YOU

We're looking for someone entrepreneurial and interdisciplinary, not just strong technically, but excited to work across research, clinical studies, and translational innovation.

The role includes:

- AI/ML & biomedical imaging
- Ultrasound-guided spleen detection & targeting
- Clinical study coordination
- Working with physicians, researchers, and industry stakeholders
- Translational medical device development
- Wearing many hats in a fast-moving startup environment

The postdoc will help develop technologies for precise spleen localisation, while avoiding surrounding anatomy and accounting for respiratory motion.

Ideal background:

Biomedical engineering, AI/ML, medical imaging, neuroscience, translational medicine, or computational biology.

Join us if you are a strong AI/ML scientist with an entrepreneurial mindset and a passion for building the future of non-invasive inflammation treatment.

Apply at iniabiosciences@gmail.com with the subject: *Application for ML/AI at INIA/UMB*, and include your CV plus a 1-page cover letter answering:

1. Tell us about something you built from scratch.
2. What's the hardest thing you've convinced people to do?
3. When have you shown exceptional initiative?
